DC – DC

Features

- 2:1/4:1 Wide Input Range
- Operating Temperature Range: -45~105°c
- Approved to CE, RoHS & REACH
- Safety Standards to IEC/UL/EN62368-1
- Efficiency up to 92%
- EMC Class A & B
- Single output 9~425V DC

Ideal Power's 28SQBvvvvvv-x-y-B150 150W Quarter Brick DC/DC Converters Series are certified to CE, RoHS, REACH & EN 62368-1/IEC 62368-1/UL 62368-1/EN 50155 Standards and comply with the relevant Efficiency Regulations. These are primarily used in ITE, Audio & Video, Railway Industries and customised solutions are available upon request.

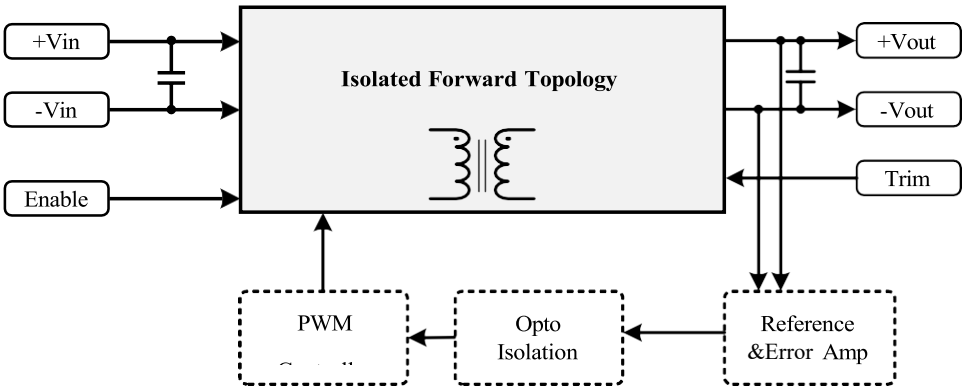
Description

Supreme series - Quarter Brick converter is composed of Isolated, board-mountable, fixed switching frequency DC-DC converters that use synchronous rectification to achieve extremely high-power conversion efficiency. These DC-DC converter modules use advanced power processing, control, and packaging technologies to enhance the performance, flexibility, reliability, and cost effectiveness of mature power components. Each module is six-sided metal case enclosed to provide protection from the harsh environments seen in many industrial and transportation applications.



Input Specifications

Case Material	Aluminum				
Potting Material	Silicone				

EMC Specifications

Parameter	Conditions		Level
Environmental Compliance	Reach; RoHS		PASS
EMI	EN55022		Class A / Class B
ESD	EN61000-4-2	±4 kV Air Discharge ±4 kV Contact Discharge	Perf. Criteria A
Radiated immunity	EN61000-4-3	Level 2, 3 V/m	Perf. Criteria A
Fast transient	EN61000-4-4	±2 kV Applied	Perf. Criteria A
Surge	EN61000-4-5	±2 kV Applied	Perf. Criteria A
Conducted immunity	EN61000-4-6	Level 2, 3 V rms	Perf. Criteria A

It is recommended to protect the input by fuses or other protection devices.

Modules could meet EN55022 Class A and Class B standard with external components.

Output Voltage Adjustment

Only the single output converters have a trim function. That allows users to adjust the output voltage from +10% to –10%, please refer to the trim table that follow for details. Adjustments to the output voltage can be used with a simple fixed resistor as shown in Figures 1 and 2. A single fixed resistor can increase or decrease the output voltage depending on its connection.

Note:

※ Trim adjustments higher than the specified range can have an adverse effect on the converter's performance and are not recommended.

※ If the trim function is not used, leave the trim pin open.

Trim Up

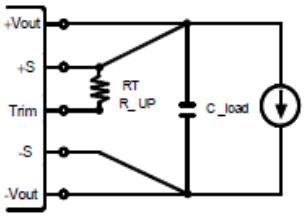

Figure 1. Trim Connections To increase Output Voltages Using Fixed Resistors

Trim up resistor value (KΩ)										
Vout	**1%**	**2%**	**3%**	**4%**	**5%**	**6%**	**7%**	**8%**	**9%**	**10%**
5	109	50	30	20	14	10	7	5	3.3	2
12	258	115	67	44	29	20	13	7.8	3.8	0.6

48	1039	464	273	177	120	81	54	34	18	5

Trim Down

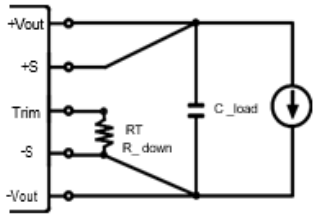

Figure 2. Trim Connections to Decrease Output Voltages Using Fixed Resistors

Trim up resistor value (KΩ)										
Vout	**1%**	**2%**	**3%**	**4%**	**5%**	**6%**	**7%**	**8%**	**9%**	**10%**
5	137	62	37	25	17	12	9	6	4	2.2
12	358	162	96	63	44	31	21	14	8.9	4.5
24	769	352	213	143	102	74	54	39	28	18
28	860	392	236	158	111	80	57	41	28	17
48	1413	638	380	251	173	121	85	57	35	18

Enable Control Function

The primary-side, Enable Control function can be specified to operate with either positive or negative polarity. Positive-polarity devices are enabled when the enable pin is left open or is pulled high .
See “Enable Function Input.
Positive-polarity devices are disabled when the enable pin is pulled low (under +1.0V with respect to –input). Negative-polarity devices are off when the enable pin is high/open and on when the enable pin is pulled low. See Figure 3.

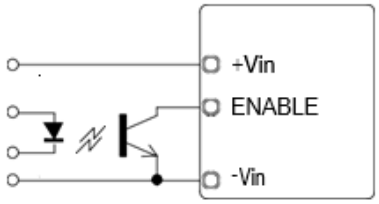

Figure 3. Driving the Enable Control pin

Output Ripple Noise

The two copper strips simulate real-world PCB impedances between the converter and its load. Scope measurements should be made using BNC connectors or the probe ground should be less than 1/2 inch and soldered directly to the fixture.
All external capacitors should have appropriate voltage ratings and be located as close to the converter as possible.
Temperature variations for all relevant parameters should be taken into consideration.
The most effective combination of external I/O capacitors will be a function of line voltage and source impedance, as well as load and layout conditions. See Figure 4.

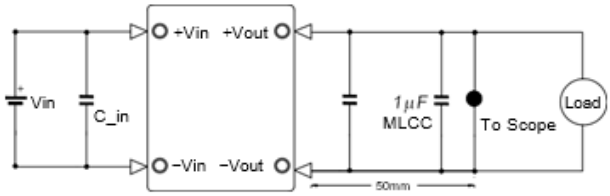

Figure 4. Measuring Output Ripple/Noise (20MHz bandwidth)
