**CAUTION:** This power module is not internally fused; an input line fuse must always be used.

If the load has sourcing capability (Ex: Battery or Super Capacitor), an output line fuse must always be used.

Mode	Description	Condition
CV Region	In normal operation, the output current is shown in datasheet	Resistance Load > Vout / Iout (CC Point)
CC Region	If the output load current is over rating, the output current will keep in a constant value, and the output voltage will fall.	Resistance Load < Vout / Iout (CC Point)
Hiccup Protection	If the output resistance become short, it will operate in hiccup protection.	WAF(D)150-S12W, WAF(D)150-S15W: Vout < 4.3V (typ.) to Output Short  WAF(D)150-S24W, WAF(D)150-S28W: Vout < 8.0V(typ.) to Output Short.  WAF(D)150-S48W: Vout < 13V(typ.) to Output Short.

**Fuse Consideration**

This power module is not internally fused. An input line fuse must always be used. This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture. To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The input line fuse suggest as below :

Model	Fuse Rating (A)	Fuse Type
43WAF(D)150-24S-W	30	Fast-Acting
43WAF(D)150-48S-W	15	Fast-Acting
43WAF(D)150-110S-W	6.3	Slow-Blow
